Outline

- Overview of deep learning
- Potential of Racket for deep learning
- Progress on the DeepRacket library
- What should the next steps be?

Overview of Deep Learning

- What are neural networks?
- What is deep learning?
- How does deep learning work?

What are neural networks?

What is deep learning?

WHAT MAKES DEEP LEARNING DEEP?

Today's Largest Networks

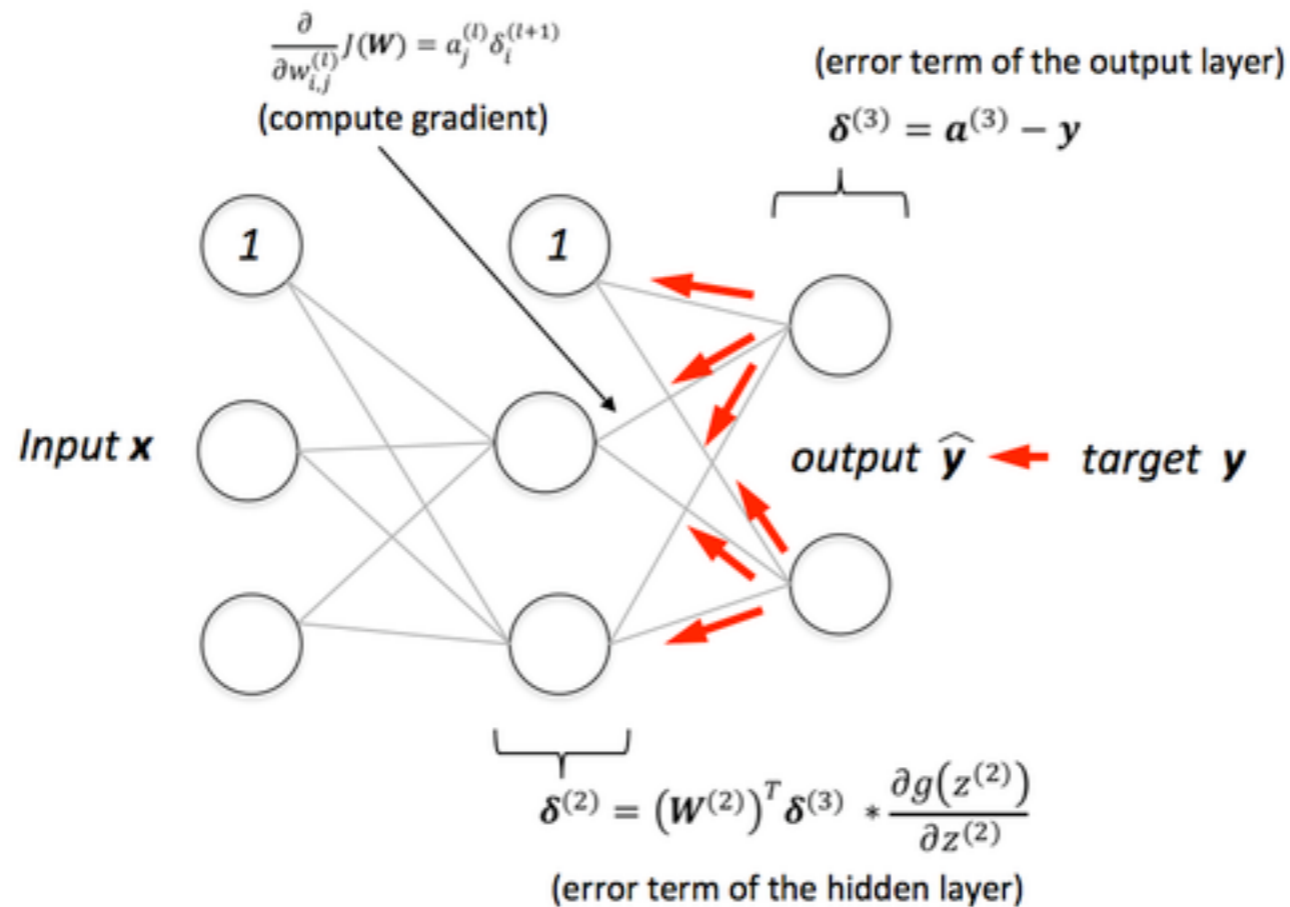

- 10 layers
- 1B parameters
- 10M images
- 30 Exaflops
- 30 GPU days

Human brain has trillions of parameters - only 1,000 more.

Input Result

NVIDIA

How does deep learning work?

Potential of Racket for Deep Learning

- How does functional programming apply to deep learning?
- Specifying deep networks dynamically.
- Specifying and running in Racket

Recurrent Nets

$$h_t = W \cdot h_{t-1}$$
$$o_t = \tanh(h_t + U \cdot x_t)$$

Thinking of Deep Learning Functionally (Colah, 2015 & Balduzzi 2016)

Encoding RNN

`foldl A s`

RNN

`mapAccumR a s`

As dynamic graph computation

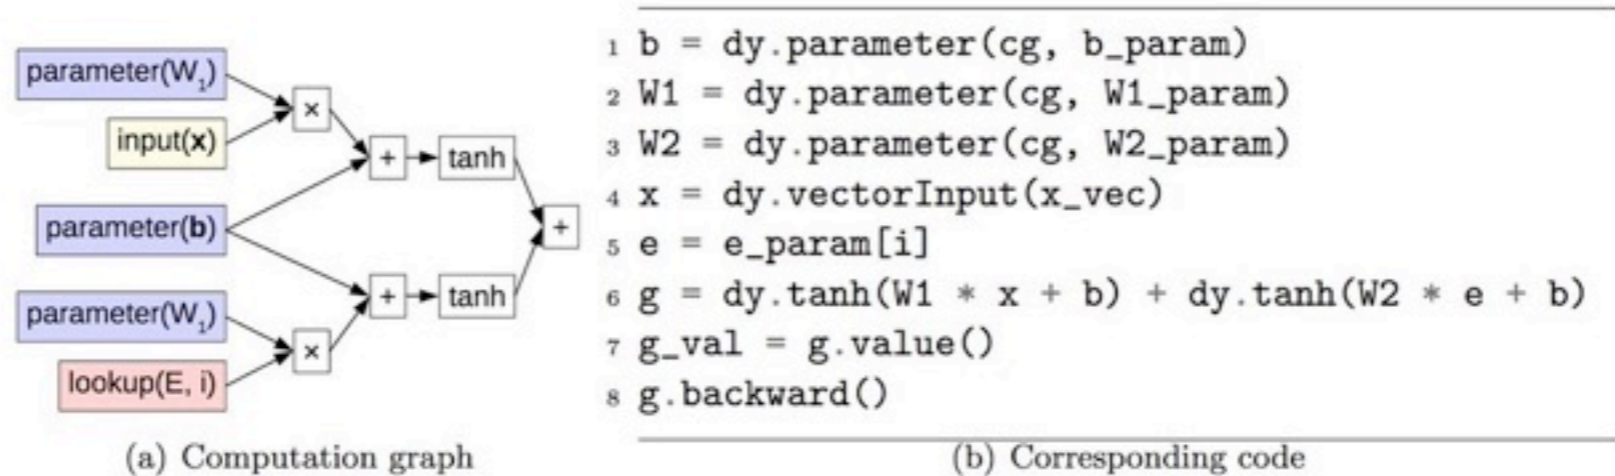

Figure 4: An example of a computation graph for $g(\mathbf{x}, j) = \tanh(W_1 * \mathbf{x} + \mathbf{b}) + \tanh(W_2 * e_j + \mathbf{b})$, and the corresponding code.

Specifying and running in Racket

```
(let ([W (def-filter (3 2))]
      [x (def-tensor (2))])
  ...
  [sgd (create-stock-grad-optimizer )]
  [rnn (def-expr (+ (* W x) (* U h) b)) ])

(for ([i (range epochs)])
  (compute-fwd rnn)
  (compute-backward rnn (loss yhat y))
  (compute-backward rnn)
  (update-weights sgd rnn)))
```

Now train it!

Benefits

- Giving students exposure to deep learning
- Exploration of new functional architectures
- New paradigms for machine learning (e.g. alternatives to backprop)
- CUDA/OpenCL access for Racket

Progress on the DeepRacket library

DeepRacket

- A cudnn wrapper
 - Built with typed Racket, Math and FFI libraries
 - Specification of RNNs and forward (estimator) and backward (gradient) computation
 - Still need loss and optimization (SGD)!
- A dynet wrapper
 - Specify selected networks
 - Training

A quick DeepRacket demo

```
run-dynet.rkt - DrRacket
Check Syntax Debug Macro Stepper Run Stop

#lang racket
(require
 "simple-dynet-api.rkt")

(begin
 (init_dynet)
 (let*
  (
   [hidden-size 8]
   [cg (get_computation_graph)]
   [pc (get_parameter_collection)]
   [sgd (get_simple_sgd pc)]
   [w (add_parameters_shape_two cg 8 2 pc)]
   [q (add_parameters_shape_two cg 8 2 pc)]
   [yval (get_dynet_vector 1)]
   [xval (get_dynet_vector 2)]
   [xval_ptr (get_dynet_vect_ptr xval)]
   [yval_ptr (get_dynet_vect_ptr yval)]
   [y (create_outputs cg yval)]
   [x (create_n_inputs_vtr cg xval 2)]
   [v (add_parameters_shape_two cg 1 8 pc)]
   [b (add_parameters_shape_one cg 8 pc)]
   [a (add_parameters_shape_one cg 1 pc)]
   [h (create_tanh w x b)]
   [pred (create_pred v h a)]
   [loss_expr (create_loss pred y)]
   [loss 0.0]
  )
 (for ([epoch (in-range 30)])
  (for ([mi (in-range 4)])
   (let*
    (
     [x1 (modulo mi 2)]
     [x2 (modulo (quotient mi 2) 2)]
     [input1 (if (eq? x1 1) 1.0 -1.0)]
     [input2 (if (eq? x2 1) 1.0 -1.0)]
     [output (if (not (eq? x2 x1)) 1.0 -1.0)]
    )
    (set_dynet_vptr xval_ptr 0 input1)
    (set_dynet_vptr xval_ptr 1 input2)
    (set_dynet_vptr yval_ptr 0 output)
    (set! loss (+ loss (get_scalar_loss cg loss_expr)))
    (do_backward_loss cg loss_expr)
    (update_params sgd 1.0))
    (set! loss (/ loss 4.0))
    (display (format "Current loss is: ~a\n" loss))))))
```

AUTOMATTIC

the web a better place.

What's next?

AUTOMATTIC
We are passionate about making
the web a better place.

Useful directions?

- Better Syntax!
- Device agnostic
 - GPU and CPU
 - OpenCL
- Dynamic graph computation
